

List of Errors

- While check login inputs should be filled separate from each other.Example:loginFillemailId(emailId: string), loginPassword(password: string).
- Cypress config file is named config.config.ts instead of cypress.config.ts
- Should be if checks for each page loads since site could throw 508 Resource Limit Is Reached **error message**.
- Typo error `loginPage.validateLoginError('Invalid email addressssss.')` should be `loginPage.validateLoginError('Invalid email address.')`
- All assertions should be in tests not in pages,in the pages must be only locators and assertion locators must be in the pages related to it.
- Example: `myAccountPage.validateSuccessfulLogin()`
- Should be: `loginPage.validateSuccessfulLogin()`
